**Read the text. Then tick ( ✓ ) the correct statement. There is an example (0) at the beginning.**

### **Important Information about the use of the air humidifier\*** **- Please keep for reference purposes**

- Read these instructions carefully.
- Remove all packaging material before using the unit for the first time.
- The unit must only be connected to the voltage supply specified on the rating plate (not a d.c. voltage supply).
- **Caution:** The unit generates steam and there is a danger of being scalded.
- If the unit is damaged then it must only be repaired by the Beurer Customer Service Department or a dealer, since special tools are required. If the unit is repaired incorrectly then this may put the user at considerable risk.
- If the device's power cable has been damaged, it may only be replaced with an original power cable, which is available from the service address in the documentation.
- Always remove the mains plug when cleaning, filling or moving the unit. Ensure that your hands are dry during any of these operations. **Caution:** the heating element is hot after the unit has been working. Always allow the unit to cool down before moving, filling or cleaning it. Never grasp the unit by the connector socket in the evaporator head.
- Never open the air humidifier without first removing the plug from the mains and the connector from the unit as this could result in electrocution.
- Children do not recognise the dangers associated with electrical equipment. Ensure that the unit is never used by children without supervision.
- Only use clean tap water to fill the tank. Make sure that the tank cover is tightly closed and that the tank is not overfilled.
- Under no circumstances should salt or any other substance be added to the tap water.
- Do not add any air fresheners to the water tank (add them to the tank specifically designed to hold them). Ensure that all agents used for cleaning the unit are carefully removed before it is used. To prevent damage, do not use any abrasive substances, solvent, glass or furniture polish to clean the housing.
- If you have any questions about the use of the air humidifier then please contact our customer service department.

\* (a machine to keep the air moist with the help of steam)
